

PERMANENT MAKE-UP

What is Permanent Make-up / Micropigmentation?

Micropigmentation is a state of the art technique where small amounts of pigment are placed under the skin creating natural enhancements to facial features. This is a progression of the ancient art of tattooing. Unlike tattooing, Micropigmentation does not penetrate the skin as deeply and the pigments used create a natural appearance rather than a colourful design.

Who would want to have Permanent Make-up / Micropigmentation?

As an ever growing treatment procedure in the beauty industry, Micropigmentation offers effective results for those who either do not have the skills to apply make-up on a daily basis, young or old alike. Also, ladies who play a lot of sport or live in a hot climate find that permanent make-up allows them to enjoy their activity without the worry of their make-up running or being wiped off. Or you may simply want to enhance your features and not have to worry about using make-up on a daily basis.

Eye brows. A lot of eyebrow procedures are performed on ladies who, in their youth, over plucked and their eyebrows never grew back! Even if a client does have eyebrows she often has to pencil them in to hide patches and give more definition.

Lip line/Colour. As a result of maturing years, some ladies find that their lipstick bleeds, and a lip line can reduce the effects of this, or in some cases a client may have uneven or very thin lips and a lip line can help correct the shape to give a fuller appearance. Lip blush can add colour to faded or very pale lips.

Eye line. Eye line is ideal for women who wear glasses or have an unsteady hand but want to create either a soft or dramatic line around the eye.

Areola (nipple) Creation/Re-pigmentation. This is ideal for clients who have had surgery and there is scarring around the nipple or there may be no nipple as in the case of a mastectomy, a nipple can be created. Also ladies with pale Areola can have them enhanced.

Camouflage. Differences in skin colour can be evened out on scars, burns or grafts by applying skin match colours to the affected area.

Multi-Trepanic Collagen Actuation (MCA). This can be used to flatten raised scars, relax burn scars, raise dipped scars or stimulate re-pigmentation of an area of skin.

How long does it last?

Micropigmentation can stay in the skin for many years, but in general lasts between one and three years depending on the clients skin type and age.

Does it hurt?

The skin is not penetrated too deeply and steps can be taken to numb the area prior to the procedure to minimise discomfort, the experience is similar to a scale and polish at the dentist.

PROCEDURE PRICE LIST

Consultation & Skin Test (per area to be treated)	£ 50.00
BROWS	
Enhance (fill in gaps- part brow)	£400.00
Sparse (few hairs-full brow)	£460.00

Nd Yag Laser & Calibrated Pulsed Light CPL HAIR REMOVAL

Superfluous hair can be a problem for both men and women. Technology is constantly improving and updating the methods by which hair can be successfully removed with lasting results, Laser Nd Yag or CPL for hair removal IS A SAFE AND EFFECTIVE WAY OF REMOVING HAIR.

By targeting the pigment in the hair, the energy travels down the follicle disabling its activity and delivering long term results without damaging the surrounding skin. Hair grows in cycles and its growth is influenced by many factors such as weight, age, metabolism, medication, hormone activity etc. Due to these factors it is difficult to predict how many treatments any individual will require to achieve the best long term results.

An in-depth consultation will be given prior to any treatment course. The duration and gap between treatments will vary according to the treatment area, strength and cause of the hair growth. The frequency of treatments will be recommended to suit your needs. A full explanation of the treatment and the hair growth cycle will be given during the consultation, which includes a patch test.

Nd Yag Laser & Calibrated Pulsed Light CPL & Shortwave Diathermy Treatments

The combination of both Nd Yag Laser and Calibrated Pulsed Light rolled into one machine allows us to treat a number of different conditions. As well as Hair Removal we can adapt the settings to treat problems such as Acne, Rosacea and Pigmentation. We can also treat the skin for signs of ageing with the skin Rejuvenation programme. Thread Veins, Rosacea and pigmentation can also be treated with shortwave diathermy current and the appropriate course of treatment will be advised at the consultation.

	Course Of 6 Sessions	Single Session
Skin Rejuvenation	£ 972.00	£ 180.00
Acne Treatment - Face	£ 972.00	£ 180.00
- Back	£1,512.00	£ 280.00
- Chest	£1,188.00	£ 220.00

Pigmentation (up to 10 minutes per session) £75.00

Thread Vein Treatment (Legs/Body) per 10 minutes £75.00

Thread Vein /Naevous Treatment (Face)

Up to 10 minutes per session £75.00
This is a successful treatment using an advanced electrolysis method to cauterise fine thread veins or spider naevi to improve the skin appearance. Your first session will be a complete consultation involving a full medical history and patch test of the area to be treated.

Skin Tag Removal

Up to 10 minutes per session £75.00
Unightly skin tags on face, neck and body are usually made up of loose fibrous tissue and may sometimes contain pigment, making them more noticeable. They can be eliminated by using advanced electrolysis techniques which involves cauterising them with a diathermy current.

Skin Blemish /Pigmentation Removal

Up to 10 minutes per session £75.00
Unightly skin blemishes such as seborrheic keratosis also known as derma keratosis, cherry angiomas or Campbell de Morgan, pigmentation and age spots can be effectively removed using short wave diathermy current.
